

marimekko®

BY  **SIRPI**

Before you begin, please read the installation details located on the back of the label that comes with your wallpaper. These instructions are very thorough and should be followed.

Important Symbols to Understand

1. Strippable: wallcoverings that can be dry stripped from the wall leaving a minimum of paste or adhesive residue and without damage to the walls surface.

2. Washable: wallcoverings that can withstand occasional sponging with a prescribed detergent solution.

3. Good light fastness: the ability to resist change or loss of colour caused by exposure to light over a measured period of time.

Suggested Adhesive

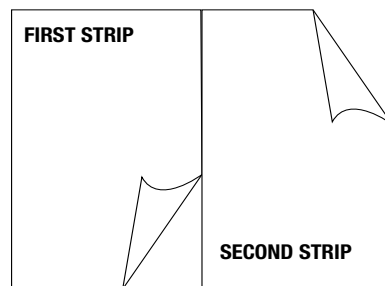

Pre-mixed, light to medium weight, clear wallpaper adhesive.

Batch Numbers

During the manufacturing process a batch number is printed on each roll. This number represents a particular group of rolls that are printed on the same print run. The batch number will change each time there is a change in the printing process. Different batch numbers could signal variables such as a possible tonal change of colour, a change in the vinyl coating or a change in the consistency of the embossing process being used during manufacturing.

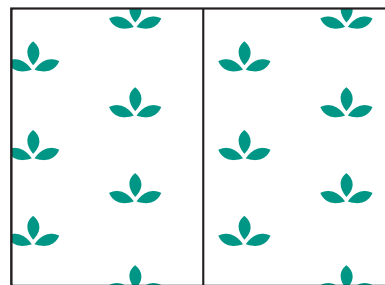

Pattern Matches

Be sure to know what type of pattern match the wallcovering has. There are three major types:

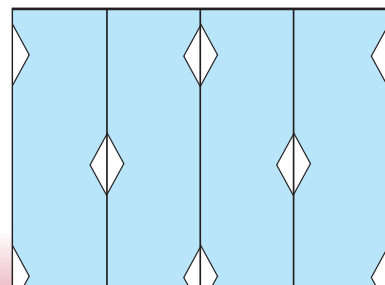

1. No Design Pattern Match

The pattern matches no matter how adjoining strips are positioned.

2. Straight Across Match

This match has design elements which match on adjoining strips. Every strip will be the same at the ceiling line.

3. Drop Match

Every other strip is the same at the ceiling line and the design elements run diagonally.
